

1.If anything was possible, what would your dream job be, and why?

If anything is possible, my dream job would be a Civil Engineer. I am fascinated with constructing structures and also doing projects. I love Mathematics, and anything related to Mathematics was enjoyable for me. I love doing Calculus and Algebra problems and I can spend a whole day just solving Math problems. Every time there are projects that need to be built, I enjoy doing those and it became a leisure activity for me rather than a school requirement. My biggest dream is to personally construct my own house as a Civil Engineer. It was my long-life dream but unfortunately, I didn't have the chance to take an Engineering course because of some circumstances. If anything is possible and I can turn back time to do things in order for me to take the Engineering course, I would definitely take that chance and pursue my passion. I can say that everything happens for a reason and I would just go with the flow and let it take me to where I'm destined to be.

2. Have you ever experienced a stressful situation in your past workplace (college if fresh graduate), what was it and how did you overcome it?

Everyone already dealt with stressful situations in their life and I can say that I have already experienced them way back when I'm in college. A stressful situation as a student is the bombing of deadlines in all outputs. It is during exam week which we also call "Hell Week". We call it that way because those are times that we are so stressed that all the outputs, presentations, and exams are bombing in our faces that we don't know what to do first. Fortunately, I cope with those situations by doing the outputs one at a time in an orderly manner. I finished first the outputs that are due earlier than the other and then finish them one by one until all of them are done. Cramming is not an advisable strategy as it will just mess up the mental condition of a person. Remaining calm and assessing the situation is the best strategy. Being in a positive environment also helps, it gives a calming effect and can condition the body and brain to function without feeling pressured and less stressed.

3. In your previous position, what task did you find most challenging and why? What task did you enjoy most and why?

The task that I find most challenging is dealing with the students. During my internship, I got to experience dealing with the students during the Math tutorial held by my cooperating school with willing students who attended the said tutorial. It is challenging for me because it is my first time conducting a math lesson with the students and including the factor that it was their first time again attending a face-to-face Math class after the pandemic that only allows them to have a distance learning mode. I had a hard time teaching them the formulas and executing problems using the formula because from time to time I had to teach them the basics as they had already forgotten about them. I just had a little patience regarding teaching and from that, I can say that teaching is not my passion. What I enjoyed the most was the part where I did school forms and PowerPoint presentations for the lesson plans. I enjoy taking my time alone doing tasks and finishing them quietly on my desk.

4. How would your previous managers/coworkers describe you?

My previous co-interns and classmates usually describe me as a jolly and smart person. They had the same first impression of me saying that I kind of looked intimidating to them at first glance and become a jolly person once they know more about me. They always had the impression of me as the type of person to become a leader in group activities in doing tasks and projects responsibly. I am a quiet person inside the classroom who is more focused on the tasks and they've seen that as a competitive person. They often describe me as a competitive person inside the classroom and become a warm friend outside the classroom. They describe me as a reliable and responsible student in doing projects and tasks as I never failed to complete the school tasks in time as I was aiming for a Latin honor when I was a student. Fortunately, those attributes helped me in achieving my goal, and I became a graduate student obtaining a Latin Honor.

5. What personal or professional accomplishments are you most proud of?

The personal accomplishment that I am most proud of is graduating with a Bachelor's degree and obtaining a Latin honor as Magna Cum Laude. It was the proudest moment in my life considering the hard times that I experienced while maintaining good grades and image as a student. I am most proud because, after the three years wasted before I enrolled in college, it became successfully fulfilling that I've finally made it. Being a fresh graduate, passing the application in Pathcutters, and being in the trial was the professional accomplishment that I am most proud of. I am aware that it is not easy to be in the trial and I am fully aware that most of my batchmates from my school also applied for the job but didn't pass the on-site testing. That is why I am proud of myself and it is my pleasure to become an employee of Pathcutters.
