

**1.If anything was possible, what would your dream job be, and why?**

My dream job is in Civil Engineering. One of the reasons is that I want to help my father in the field of construction. He is a contractor and I have worked with him since elementary school. I know how hard it is to find a job, even a contract for a job, especially since he is coming to the age of retirement. I want to work with him again not just as a helper to the skilled worker but as an Engineer that would give him projects enough to sustain our daily needs and would help him reach his goal which is to help my siblings finish their studies as well. I also want to be an Engineer because I know that this job would help me give my own family a comfortable life where I could provide for their needs, give them what they want, and even have enough spare to help others in need as well.

**2. Have you ever experienced a stressful situation in your past workplace (college if fresh graduate), what was it and how did you overcome it?**

Yes, I have this experience that I can consider the most stressful time when I was still studying in college. This is the time when almost all of our teachers gave us tasks to finish at the same time. We were given 2 days to finish the tasks and it really overwhelmed me because there are also issues on my side that I need to solve first. First, I don't have a laptop to use for the documents that I need to send, and if I use my mobile phone, it will take me 2-3 hours to finish the task. Second, I have limited data to use for the internet because at that time we are still in our new normal schedule or online class. Lastly, I cannot focus on doing the tasks because I have other subjects to attend to. In order to finish all of the tasks that my teachers gave me, I tried to finish 1-2 tasks in my free time and after my class schedules at night, I tried to finish tasks as much as I could until midnight and did the same thing on the next day until I finished all of the tasks that was given to me.

**3. In your previous position, what task did you find most challenging and why? What task did you enjoy most and why?**

As I was attending college, the task I found challenging the most was making 3D designs in SketchUp or in AutoCad. We have been taught how to use these tools, but the lessons and instructions are not really clear to us. We also have difficulties asking our instructor as he will just ignore our messages or questions. For us to have a project to submit to him and learn for ourselves we tend to do self-study, we even watched videos on YouTube regarding the said topic.

The tasks that I enjoy the most are drawing perspectives and floor plans. In the University that I attended, drawing floor plans manually is discussed but not focused on. Using SketchUp and AutoCad as a tool in drawing floor plans is what is being focused on right now. As I had been given an opportunity to draw a floor plan manually, I felt so excited and really finished the task early

#### 4. How would your previous managers/coworkers describe you?

In the University, most of the time our performance is not evaluated by our instructors. Mostly our classmates would say things that they had observed from us. My classmates described me as a leader and an exemplar for them. Most of the time they want me to lead them and if I disagree to do a certain thing, they will disagree also. They would always follow what I say to them, which made me think that it may be because of our age gap. I had been an exemplar for them as it had been a hobby for me to do things such as answering assignments, reviewing notes, or reading books during my free time. As they had chosen to befriend me, I observed that they are also doing things that they see me do. It really made me happy seeing them absorbing things from others that they could use for their own benefit.

#### 5. What personal or professional accomplishments are you most proud of?

One accomplishment that I am really proud of myself is that I finished a 2-year mission with honor. With the span of 2 years, many things can change a lot. In my mission, I learned so many things that I had applied to myself up until now. These are arriving on the site before the schedule, having a sense of empathy, adapting to different environments, and understanding others that have different cultures, religions, languages, and attitudes. These experiences and learnings helped me become more mature in facing life's challenges. I also learned to have a backup plan whenever I have something to do. Success rates in a planned action are not always one hundred percent, backup plan is important if in case the things I planned to do fails. Because of these improvements and growth that I have seen in myself, it really made me so proud that I went on my mission and returned with honor.
