1. If anything was possible, what would your dream job be, and why?

My dream job is probably to be an actress or model. Since I was a kid, I wanted to do a job where I could act and my family would be able to see me on television from time to time. I have loved watching movies and dramas since then, and I am so impressed with the actors and actresses in how they portray their characters. On that note, I want to experience that kind of thing. In addition, I want to become a model. It's been my dream to be one. I consider myself a fashionista because I really like dressing up, especially when I need to go out to hang out with my family and friends. I like spending my money on buying different kinds of bags, clothes, and even accessories. I believe that by being a model, I can really express myself and my own personality. I also like to take a lot of photos of myself, exploring different angles and poses that are suitable for me.

2. Have you ever experienced a stressful situation in your past workplace (college if fresh graduate), what was it and how did you overcome it?

Yes, I experienced a lot of stressful situations when I was in college and when I worked as an intern. Back when I was in college, I struggled a lot in terms of understanding the course that I took, but eventually I understood the concept of it with the help of our department and my classmates. I also struggled with different projects that I was making for our laboratories, and I really tried my best to know the step-by-step process by searching online and watching tutorial videos. One of the things that I really struggle with is when we do a prototype of our thesis. Considering that we need to come up with something that is relevant to our society, I managed to overcome it by dedicating all my effort as much as I could, and with the collaboration of my team, we managed to pass our thesis. In terms of my work as an intern, at first, I struggled a lot with doing different tasks, especially cabling, but as the days went by, I managed to learn all about the work by practicing it, and I enjoyed it.

3. In your previous position, what task did you find most challenging and why? What task did you enjoy most and why?

In my previous work as an intern at an IT office, the task that I found most challenging was cabling. Network cabling is a kind of work that connects a computer and other devices to a network. It takes a lot to understand this since you need to have an actual plan for where to put the cable that can make the surrounding area clean without being visible. It is also confusing because every part of the cable with a specific length is numbered to determine the position of the devices attached to it. Doing a building's floor plan is what I like and enjoy the most. It's quite challenging, but it helps me a lot to enhance my layout skills using AutoCAD. When I was an intern, we managed

to do floor plans for different buildings at the University of St. La Salle. I enjoyed doing it, and in that way, I can learn different aspects of network layout.

4. How would your past colleagues or managers describe your work ethic?

Being cooperative, disciplined, and productive is how my past colleagues or managers describe my work ethic. I believe that having a strong work ethic means a lot, especially as an employee. It has a great impact on your output, especially when doing complicated work. Being cooperative starts within an employee since it shows how an employee manages to cooperate in a team collaboration kind of work. I am very cooperative in doing team tasks. I want to collaborate on my ideas with them and have a good outcome. Being disciplined is something you must possess since doing different kinds of tasks and work starts with it. When I do my work, I prioritize finishing it first before doing other tasks. Being productive is important since it shows how good you are at your work. It is something that an employee must have since it shows their willingness to achieve beyond expectations.

5. What personal or professional accomplishments are you most proud of?

The personal or professional accomplishment of which I am most proud is that I have passed both the Electronics Engineer and Electronics Technician board exams. Being able to achieve this is a very big blessing for me and my family. I am so happy since all my hard work and sleepless nights during my college years and my review journey have paid off. I am so proud of myself for achieving this milestone because it's my dream to be the first engineer in the family. I go through a lot of challenges before achieving it, and it takes a lot of courage to conquer it all. I prayed for it, and God heard my prayers. I am so thankful that God is always by my side and guiding me throughout my board exam journey. Nothing is impossible when you put in all your effort and believe that you can do it.
