

1. If anything was possible, what would your dream job be, and why?

- My dream job would be a mining engineer since the job description is fit for an introvert. They assign you somewhere far, evaluate processes, and check for the product quality which requires less interaction with peers. Another is to teach in university since, despite my character, I also like having different and unexpected situations every day and a school is a perfect place for that. It is not really the ideal workplace for an introvert, but I love diversity and the habit of learning every day.

2. Have you ever experienced a stressful situation in your past workplace (college if fresh graduate), what was it and how did you overcome it?

- I experienced stressful situations when I was in college. The most notable one was when we submitted our thesis paper on the research board in our school for the selection of Best Thesis by department. I was so frustrated when one of my groupmates said that he copy-pasted some of our content from the internet without paraphrasing and I was swamped with the different sections I must double-check and I trusted him to do the task. I broke down and cried for a bit, then gathered myself again since we still have another round of editing for the publication and bookbinding.

3. In your previous position, what task did you find most challenging and why? What task did you enjoy most and why?

- The task I find most challenging is doing the structural inspection of houses to see if it is ready to be put on the market and for further polishing. One small mistake and mis look at the structural property will be a grave impact if the property is already on the market. The task I enjoy the most is site visit, since we travel a lot around Negros Occidental, depending on where we need to check the progress of the road construction and additional maintenance.

4. How would your past colleagues or managers describe your work ethic?

- My classmates (with were also my colleagues during OJT) describe me as an 'early bird' since I always come on time. If I am 10-15 minutes late, they would assume I'll be absent. My senior engineer also said that I'm easy to talk to, and I chatter about things I'm interested in. My professors also describe me as someone they can easily manage and does work on time.

5. What personal or professional accomplishments are you most proud of?

- The personal accomplishment I am most proud of is when I graduated with Latin Honors as the only female candidate in the engineering department, while being on the Dean's List all semesters. I worked so hard to maintain my grades to keep my scholarship despite having financial troubles and stressful situations. I do have a lot of shortcomings and I'm proud I managed to pull through.
