1. If anything was possible, what would your dream job be, and why?

If anything were possible, my dream job would definitely revolve around computer hardware and building custom PCs. I've always been fascinated by how each component works together to create a powerful and efficient system. The process of selecting parts, assembling them, and troubleshooting any issues is something I genuinely enjoy. It's not just about the technical aspect, it's also about the creativity involved in designing a setup that's both functional and visually appealing. I find satisfaction in optimising performance and helping others build systems according to their needs. Whether it's for gaming, productivity, or professional use, being able to create something from scratch that enhances someone's digital experience is incredibly rewarding. I'd love to work in a role where I can constantly learn about new technologies, test hardware, and share my knowledge with others who are passionate about computers.

2. Have you ever experienced a stressful situation in your past workplace (college if fresh graduate), what was it and how did you overcome it?

During my previous work, I encountered a stressful situation that tested my focus and resilience. There were moments when gossip and distractions from peers could have easily affected my performance and mindset. However, I chose to stay focused on my tasks and responsibilities rather than getting involved in unnecessary drama. I realized that paying attention to negativity only drains energy and hinders productivity. Instead, I concentrated on completing my tasks and deadlines, which helped me maintain a sense of control and purpose. By prioritizing my goals and staying committed to my work, I was able to overcome the stress and stay grounded. This experience taught me the importance of mental discipline and the value of staying true to one's priorities, especially in environments where distractions are common.

3. In your previous position, what task did you find most challenging and why? What task did you enjoy most and why?

One of the most challenging tasks I encountered in my previous position was printing cheques. It required extreme precision because even a single error meant starting the entire process over. Not only did I have to re-enter all the details, but I also had to use a new cheque number, which added to the complexity. It was a task that demanded patience and attention to detail. On the other hand, the task I enjoyed the most was conducting item inventory audits. These audits involved visiting warehouses, checking stock, and ensuring everything matched the records. What made it enjoyable was the hands-on nature of the work and the camaraderie with colleagues. Plus, the food provided after each audit, both in the morning and afternoon, was a nice bonus that made the experience more pleasant and memorable.

4. How would your past colleagues or managers describe your work ethic?

My past colleagues and managers would likely describe my work ethic as punctual, reliable, and independent. I consistently completed tasks on time and took initiative even when guidance was limited. In fact, I was never formally trained for my position, so I had to learn everything on my own. This taught me to be resourceful and proactive in solving problems. I didn't wait for instructions, I figured things out and made sure the work was done efficiently. My ability to work independently while maintaining high standards helped build trust with my team. They knew they could count on me to deliver results without constant supervision. I believe that being dependable and self-motivated are key traits that define a strong work ethic, and I strive to embody those qualities in every role I take on.

5. What personal or professional accomplishments are you most proud of?

One of the accomplishments I'm most proud of is building my first personal computer. It was a milestone that combined my passion for technology with hands-on learning. I researched components, planned the build, and assembled everything myself. Seeing it power on for the first time was incredibly satisfying. Beyond that, I'm proud of the personal growth I've achieved, being happy and content with my life, and being able to support my family. Helping them, whether financially or emotionally, gives me a deep sense of fulfillment. These accomplishments may seem simple, but they reflect my values and the effort I've put into becoming a better person. Whether it's through technical achievements or personal milestones, I take pride in the progress I've made and the positive impact I've had on those around me.
