

1. If anything was possible, what would your dream job be, and why?

If I am not considering my financial and health status, my dream job would be a surgeon specifically in the fields of either neurology or cardiology. One of the main reasons why I wanted to become a surgeon before is to help save lives. Aside from that, growing up, I always found myself fascinated with the way our body systems work and coordinate with one another. What fascinates me in neurology and cardiology is their complexity and structure. In neurology, it includes the brain, which is a vital part of the human body. On the other hand, in cardiology, it mainly involves the heart of the human which is also considered as vital for living.

2. Have you ever experienced a stressful situation in your past workplace (college if fresh graduate), what was it and how did you overcome it?

During my college years, I can say that I often experience stressful situations because of being a student leader. Being a student leader requires a lot of presence of mind, tough decision-making and time management. For me, one of the most stressful situations that I experienced was during our Lasallian Week 2023. We are tasked by the University Student Government to set up a booth that we think can help us raise funds and as well as showcase our course. It was a tough experience for me, the President of our academic club, since I know that we are lacking in terms of funds and manpower as well. To address the problems and to also reach another goal of the club, which is to foster relationships, I along with the other executives decided to have a collaboration with another academic club. In that collaboration, the idea of setting up an asylum-themed escape room was given birth. We also decided to seek fundings from alumni and the help of our professors to help us encourage our course mates for cooperation. Moreover, to establish a streamline of the tasks, I assigned students to spearhead sub-tasks like scheduling of staff and actors, while managing the overall operations of the booth. In the end, our collected efforts resulted in the booth gaining a lot of attention from the students at all levels, resulting in tickets being sold out in just a couple of hours.

3. In your previous position, what task did you find most challenging and why? What task did you enjoy most and why?

I had several positions during college, but the most challenging position was being the President. The most challenging part of having that position was the load of tasks and responsibilities that you were given to. From back-to-back meetings, events, documents, seminars and workshops, I needed to juggle these with my responsibilities as a student and as a daughter. Despite the challenge, what I enjoyed the most in being a student leader was being able to learn the dynamics of different people. It contributed a lot to my growth as a person since along the way, I was also able to discover and learn a lot about myself.

4. How would your past colleagues or managers describe your work ethic?

The past people that I handled or work with would describe me as hardworking, responsible and hands-on when it comes to work. These attributes were evident in the events, tasks, or projects that I handled. I think they would also associate my work ethic with the words: integrity and initiative.

5. What personal or professional accomplishments are you most proud of?

The personal accomplishment that I am quite proud of is being able to graduate without any failing marks. Graduating without any failing marks can be quite easy for some but for me, a former electronics engineering student, who is serving the student body at the same time, speaks a lot about the struggles that I have been through. Having the busiest schedule while making sure that I am still being a responsible student and daughter was quite hard. Chasing deadlines after deadlines despite being sleep and rest deprived can speak a lot about my determination and passion to what I do.

Moreover, in relation to professional accomplishment, there are two things that I am quite proud of when I served as a president. It is being able to unify the electronics engineering community in University of St. La Salle; and the club being recognized as one of the best academic clubs in the campus. All of these were possible because of the trust, support, effort and cooperation of my fellow officers and students.
